Be Ware and Be Careful - Impersonate Brands

Status: Ongoing
Started Oct 12, 2026, 5:00 PM PDT

WHERE THINGS STAND

The GoodGuys phishing campaign is still active. It uses fake paid-interview and webinar invitations to capture work Google and Okta logins, and it can relay MFA prompts. No software fix exists because this is a phishing campaign, not a product flaw.

Affected: Google Workspace / Google work accounts, Okta sign-in, Microsoft 365 / Entra sign-in (device-code lure, separate campaign), Employee webinar and event invitations

WORKAROUNDS UNTIL A FIX IS INSTALLED

- Block or report unsolicited paid-interview and webinar invitations at the mail gateway where possible.
- Require phishing-resistant MFA (hardware keys or passkeys) for Google and Okta sign-ins.
- Disable or restrict device-code sign-in in Entra ID for users who do not need it.
- Reset passwords and revoke sessions for any user who entered credentials on a suspicious page.

HOW TO CHECK IF A SYSTEM IS AFFECTED

```
Review Google Workspace admin audit logs for new sign-ins from unknown devices or
locations.
Review the Okta System Log for unexpected sign-ins and push approvals.
Review Entra ID sign-in logs for device-code authentication events from unexpected
users.
Ask staff whether they received paid-interview, webinar or event invitations in the
last few weeks.
```

ROOT CAUSE

Phishing kits host fake sign-in pages on attacker-controlled domains. They pass the victim's credentials to the real service and can present MFA challenges, which lets attackers capture the session or relay the approval.

EXPLOITATION

Campaign is ongoing per Push Security research and BleepingComputer coverage. No confirmed victim compromises were reported in the sources checked.

WHAT THE IT COMMUNITY IS SAYING

The only community post I found is an X share of the BleepingComputer article about the GoodGuys fake paid-interview campaign, posted about a day ago (date inferred from the '1 day ago' label). Reddit, Hacker News and IT forums returned no posts from the last 7 days about these lures, the listed landing domains, admin impact, workarounds, or vendor replies.

From public posts by IT administrators; not confirmed by the vendor.

TIMELINE (NEWEST FIRST)

Nov 27, 2026, 5:27 PM PST

New GoodGuys details (Push Security disclosure, eight impersonated brands, Okta kit support) and a related Microsoft/Google device-code event-invite campaign; no vendor patch or statement exists because this is a phishing campaign, not a software flaw.

Nov 27, 2026, 5:27 PM PST

Minor new detail: Push Security's teardown gives dates for the American Express and Coca-Cola brand pages and names the first Oct 13 landing page. Still no Google or Okta statement and no fix.

Nov 27, 2026, 5:07 PM PST

New: Push Security's teardown lists block-list domains for the related Google Ads lure, and one summary conflicts with Push on whether it's the same operator; still no Google or Okta statement and no fix.

Nov 27, 2026, 9:03 AM PST

New: researchers link a possibly related Coca-Cola-themed Evilginx campaign that targets Google Ads accounts (link unconfirmed), and the brand list is wider than the page names.

Nov 27, 2026, 5:01 AM PST

New: researchers report the Nvidia and Google Cloud lures changed infrastructure on Nov 17–19, and Push Security's teardown lists block-list domains. There is still no Google or Okta statement and no patch.

Nov 27, 2026, 12:58 AM PST

New details from news coverage and the Push Security teardown: an Nvidia-themed $500 AI-study lure, a Google Cloud webinar lure, and hidden kit labels. Still no Google or Okta statement and no fix.

Nov 26, 2026, 8:56 PM PST

New: Push Security's Nov 20 teardown details the GoodGuys kit (tracked since Oct 13, eight brands, work Google accounts), but there is still no patch because this is a phishing campaign, not a software flaw.
