

BIS Pro Suite — Enterprise ERP, Reimagined

The modern successor to more than twenty years of BIS ERP leadership. Web-native. Mobile-ready. AI-integrated. Open.

BIS Pro Suite is our Gen III enterprise resource planning platform — the product on which our customers will operate for the next decade and beyond. It is the successor to our long-running Oracle Forms-based ERP, engineered specifically to serve the industries and business profiles we have supported for more than two decades.

Full operational coverage

- **Order Processing** — Streamlined order processing and order entry.
- **Inventory and Warehouse** — real-time inventory visibility, bin management, barcode-driven operations, cycle counting, and multi-location support.
- **Financials** — General Ledger, Accounts Receivable, Accounts Payable, Fixed Assets, Banking and Reconciliation, Tax, period close, and audit-ready reporting.
- **Revenue Cycle** — multi-channel order entry, pricing, multi-ship-to, customer master, invoicing, and collections.
- **Procure-to-Pay** — purchasing, receiving, vendor master, approval workflows, and payment processing.
- **Shipping** — integrated carrier workflows, label generation, tracking, and fulfillment metrics.
- **Customer Portal** — self-service access for your customers, configurable per relationship.
- **Reporting and BI** — native dashboards, Excel and PDF export, and clean integration with Power BI, Tableau, and Looker.
- **Artificial Intelligence** — plain-English queries, document intelligence, forecasting, and anomaly detection, role-governed and audited.

Pro Suite is deployable in the cloud of your choice or on customer-controlled infrastructure. It is built for organizations with serious operational requirements: audit-ready controls, SOX-aligned segregation of duties, modern identity integration, and full

support for international operations, multi-currency and multi-language use, and industry compliance frameworks.

What sets Pro Suite apart

- Built by a company that has supported enterprise ERP customers for more than twenty years – not a startup learning the domain.
- Designed to preserve the workflows that already work for your team while removing the long-standing constraints of legacy platforms.
- Shaped in direct collaboration with BIS's long-tenured customer base. Configuration defaults, module sequencing, and workflow patterns reflect real operational experience, not theory.
