# Why BIS Pro Suite

<b>Web-Native From Day One</b> Users open a browser, log in, and work. No client software to install, no workstation imaging, no version-compatibility friction. Productive on any modern device, from any location, on day one.	<b>Open Architecture</b> Built on TypeScript, Next.js, PostgreSQL, and React Native — modern, widely-adopted technologies with no single-vendor lock-in. Your data, your hosting, your integration choices, on your terms.
<b>AI Built In, Not Bolted On</b> Ask business questions in plain English. Strict role-based guardrails ensure users only see what they are permitted to see. Deployable on-premises, in a private cloud, or hosted — matched to your data-sensitivity posture.	<b>Real Mobile, Real Workflows</b> Native iOS and Android companion apps for warehouse scanning, field operations, executive approvals, and customer service. Designed around how work actually happens, not a desktop shoved onto a phone.
<b>Compliance-Ready</b> Designed to meet or exceed ISO/IEC 27001, SOC 2 Type II, SOX, HIPAA, PCI DSS, GDPR, FedRAMP, and comparable frameworks. Audit trail and control catalogs map directly to what your auditors expect to see.	<b>Deployable Your Way</b> Run it on Amazon Web Services, Microsoft Azure, Google Cloud, or your own infrastructure. Data residency is a customer choice. Hosting model can change over time without re-implementing the application.

**Built on a Modern Stack**  
TypeScript • Next.js • PostgreSQL • React Native • Node.js • Open API • Secure

## Backed by BIS Computer Solutions

BIS Computer Solutions has been delivering and supporting enterprise business systems for over fifty years. Pro Suite is not the work of a startup learning the domain — it is the work of a company that has spent decades understanding how real businesses operate, what they need from an ERP, and how to deliver it reliably. Our implementation methodology is proven, our support model is consultative, and our commitment to customers is measured in decades rather than contract terms.

## Ready to Talk?

Every serious evaluation begins with an Application Design and Process Review — a structured, multi-day engagement with your leadership and operational teams that produces a written future-state design specific to your business. It is scoped, time-bounded, and delivers a concrete artifact you can act on.
