SERVICE ALERT

Prepared Nov 13, 2026, 5:39 PM PST

Reports of Technology Issues With The National Weather Service

Status: Recovering / monitoring

Started Nov 13, 2026, 7:30 AM PST · Ongoing for 10 hours 10 minutes · No restoration time given by National Weather Service yet

SUMMARY

The National Weather Service says its radars are working and there is no radar outage; some local weather webpages were showing old information. Warnings and forecasts are still being issued, so keep emergency alerts turned on and use your local NWS office or a trusted weather app. We will share more when the NWS confirms its data feed is fully restored.

Affected: weather.gov websites (some pages outdated), NOAAPort/SBN data feed, NWS product dissemination to other data centers

LATEST NEWS

The NWS says radar.weather.gov and radar are operating normally, so the radar outage reports appear to come from outdated webpages. The NOAAPort/SBN data feed degradation reported earlier on Nov. 13 has not been updated, and no cause is confirmed.

National Weather Service says: “In case you heard otherwise, there is no radar outage and radar.weather.gov is fully operational! Outdated content from isolated webpages stating otherwise has been circulating.”

IS THIS A HACK?

Not yet known — the vendor has not said what caused it.

No confirmed cause or attack has been published; the NWS has not said what failed.

ROOT CAUSE

No cause has been confirmed by the NWS. Its earlier notice pointed to a degraded NOAAPort/SBN data feed.

LAST 3 UPDATES

Nov 13, 2026, 4:22 PM PST

The NWS has now said radar.weather.gov is fully operational and that there is no radar outage, which contradicts the page's radar outage claim; the NOAAPort degradation notice has not been updated.

Nov 13, 2026, 3:17 PM PST

New information: two NWS terminal radars were returned to service on Nov. 13, and officials have linked the FAA ground stop to a telecommunications outage, though no cause for the NWS problem is confirmed.

Nov 13, 2026, 3:17 PM PST

The NWS reported a nationwide internet and communications problem on Nov. 13, 2026, which its technicians say is a degraded NOAAPort/SBN data feed; the cause is not yet confirmed.
